Guillotine Glass

Cleanable Guillotine Glass (Double Glazed & 8 mm)

Guillotine Glass Systems comprise glass panels that can be completely opened or closed as required, effectively enclosing the perimeters of areas such as balconies, verandas, conservatories, terraces, cafes, and restaurants.

The glass panels traverse between two vertical profiles, facilitated by a motor positioned at the top of the system. This motor conveys movement to the outer glass panel through a toothed chain or steel belt. Consequently, the rotating motor induces the glass panel to ascend and descend. As the outer glass panel ascends, it engages with the inner glass panel, prompting it to rise in tandem. Upon reaching the apex, the system is entirely secured and closed. Conversely, when the outer glass panel descends and reaches its lowest point, the system is fully open.

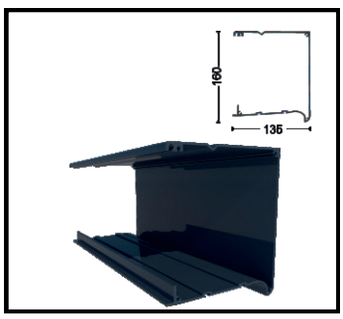

The system may feature 2, 3, or 4 glass panels, which can be fully folded either upwards or downwards.
